HIGH AIRFLOW VENTILATION UNITS
WITH HIGH EFFICIENCY PLUG FANS

- ALUMINIUM PROFILE STRUCTURE
- PREFINISHED SHEET CONSTRUCTION
- ACOUSTIC CASING WITH A THICKNESS OF 25 MM
- HIGH ENERGY EFFICIENCY
- EASY CHANGE OF AIR DIRECTION
- LOW NOISE LEVEL

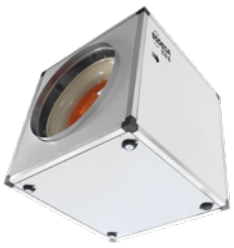
VENTILATION UNITS WITH
HIGH FLOWS

CJPF

CJPF series fans **are especially recommended for extracting and supplying air in areas with stringent soundproofing requirements**, thanks to their acoustic casing made with high quality materials.

Its cubic design facilitates adapting to the installation by modifying the fan air outlet as needed.

Interchangeable covers to supply air on either side.

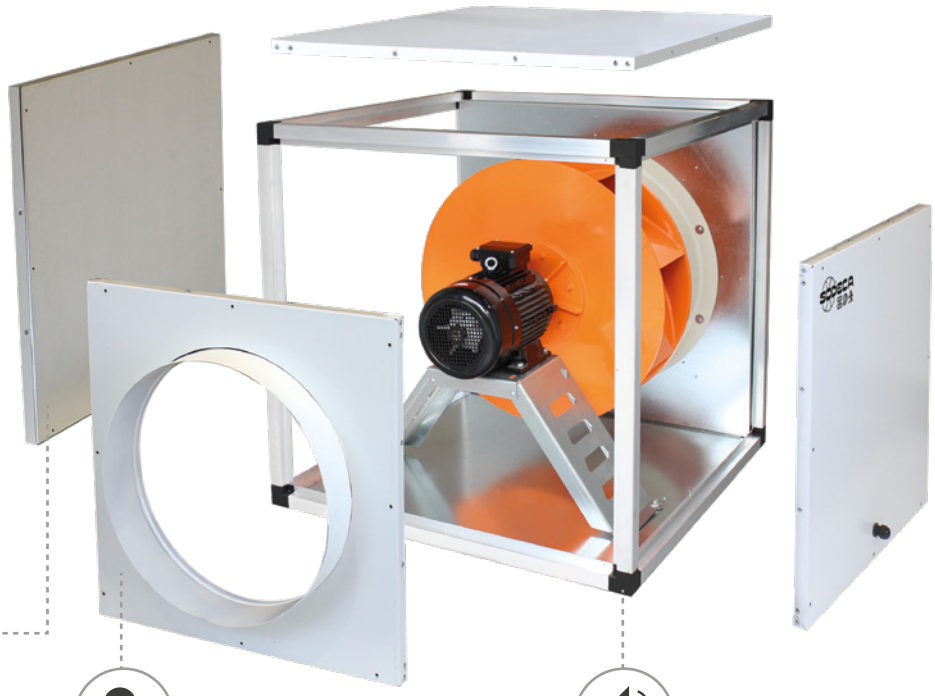


Silentblocks to prevent transmitting vibrations and for properly anchoring the unit.

ENERGY SAVINGS

The inlet is equipped with guide vanes to prevent the air flow from swirling, which, together with a dynamic pressure balance chamber, optimise the efficiency of the unit.

Guide vanes that prevent the air flow from swirling and increase efficiency.



EASY INSTALLATION AND MAINTENANCE

All the covers are interchangeable, which provides this unit with exceptional versatility, allowing to supply air in any direction. Also, the covers can be easily removed to access the inside for cleaning the impeller and conducting maintenance.

DURABILITY

The covers of this unit are made of prefinished sheet and the structural profiles are made of aluminium, which increase the service life of the fan and allows them to be installed outdoors in high corrosion areas. We recommend installing the unit under a canopy roof to prevent water from entering the unit.

LOW NOISE LEVEL

The 25 mm thick acoustic casing, which reduces noise through the use of high-quality insulation materials designed for these applications, makes it the perfect fan for installation in applications that require low noise levels.

SOLUTIONS COMPLIANT WITH THE ATEX DIRECTIVE: MAXIMUM SAFETY AND QUALITY

An ATEX zone is an area containing a mixture of air and flammable gas, flammable liquid vapour, combustible liquid mist or combustible dust, which if ignited, will cause an explosion. Many situations exist that may require specific types of fans that are suitable to operate in these explosive atmospheres. The construction of SODECA's equipment for ATEX is based on a non-sparking fan, powered by an electric motor that is compliant with the requirements of the most stringent standards. SODECA guarantees the quality of its products in order to maximise the safety of personnel and facilities.

In order to adapt its products to specific industrial applications, SODECA has standard production lines as well as a production line for building specials to the client's requirements. Its standard production line meets the most stringent standards of the European ATEX directive 2014/34/EU. The units are designed in accordance with standard EN 14986 to prevent sparks from being generated as a result of friction or impact between the moving and static parts of the fan. They are made using materials which can be combined to prevent the generation of sparks. They also include a copper inlet ring.

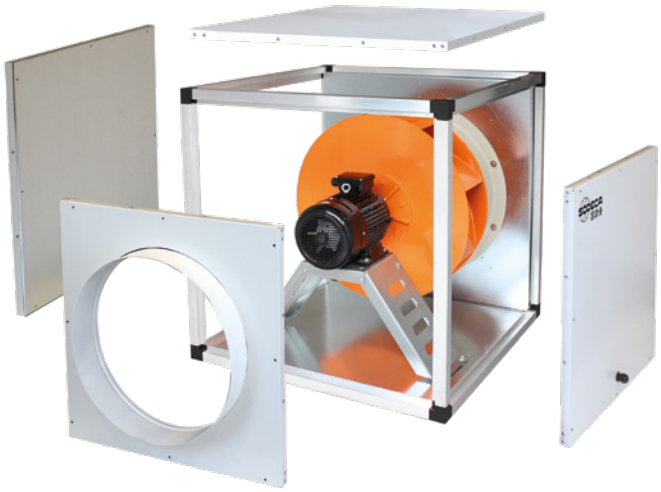
To prevent the risk of explosion in facilities with explosive atmospheres, it is essential to have certified equipment manufactured for this purpose. To comply with the standard, all painted parts of the fan are connected with earth cables to prevent sparks being generated by static electricity.

Any device installed in an explosive atmosphere must be designed and manufactured to prevent ignition and, consequently, prevent an explosion. This can lead to a considerable increase in the cost of equipment, maintenance and safety procedures in facilities with explosive atmospheres. For this reason, in most industries, there is a tendency to declassify the number of explosion risk zones where ever possible.

To fully or partially declassify an area, the area must be vented with air, free of explosive gases or dusts, in order to reduce the concentration of those gases or dusts to below the lower explosive limits. This venting process reduces the level of risk in the area or minimises the size of the classified zone, thus reducing the anti-explosive requirements of the equipment that is to be installed.

EASY TO INSTALL

All the covers are interchangeable, allowing to supply air in any direction



IN-LINE VENTILATION UNITS WITH A HIGH EFFICIENCY PLUG FAN

EFFICIENCY OF THE UNIT
Its inlet and dynamic pressure balance chamber optimise the efficiency of the unit

CJPF

Large airflow ventilation units with high efficiency Plug Fan

Large airflow ventilation units equipped with Plug Fan type fan and acoustic casing with interchangeable covers for easy installation.

Fan:
- Aluminium profile structure.
- Covers with a high quality, 25 mm thick acoustic casing made of prefinished sheet.
- Backward curved impeller.
- Standardised inlet and outlet flanges allowing for easy installation in ducts.
- Interchangeable covers to supply air on either side.
- Air inlet nozzle with diffusers that increase the efficiency of the fan.
- Silentblocks to avoid the transmission of vibrations and a correct anchoring of the equipment.

Motor:
- IE3 efficiency AC motors.
- Class F motors with ball bearings and IP55 protection.
- Three-phase 230/400 V 50 Hz.
- Working temperature: -25 ºC +60 ºC.

Finish:
- Anti-corrosive in pre-lacquered steel sheet and aluminum profiles.

On request:
- With two speed motors.
- Complete with a pressure measurement connection point for optional automatic flow and pressure control.
- ATEX certification.
